

VENTED CYLINDER RANGE

FULL RANGE OF VENTED
CYLINDERS MANUFACTURED
FROM EITHER COPPER OR
STAINLESS STEEL

ONE NAME. EVERY SOLUTION.

WWW.GLEDHILL.NET

BUILT ON EXPERIENCE

THE GLEDHILL BRAND HAS BEEN SYNONYMOUS WITH QUALITY MANUFACTURING AND EXPERTISE FOR ALMOST A CENTURY.

Our vented cylinders are produced across two manufacturing centres: Centre of Excellence for copper in Birmingham and Centre of Excellence for stainless steel at our Blackpool headquarters. This enables us to produce a uniformed and consistent quality across our products. Each centre has a dedicated team of skilled experts, producing standard and bespoke cylinders.

GLEDHILL VENTED CYLINDER RANGE

GLEDHILL PROVIDES STANDARD AND BESPOKE CYLINDERS TO SUIT YOUR NEEDS. THE STANDARD RANGE IS MANUFACTURED FROM BOTH STAINLESS STEEL AND COPPER.

Our copper range includes cylinders and combination units for all traditional domestic applications; commercial and industrial cylinders and calorifiers; products for use with off peak electricity and thermal stores suitable for use with all types of alternative energy.

OUR NETWORK

IN ANSWER TO THE DEMANDS OF CUSTOMERS WE HAVE SPECIFICALLY TAILORED OUR DISTRIBUTION NETWORK TO ENSURE OUR PRODUCTS REACH THEIR DESTINATION IN A DIRECT AND EFFICIENT MANNER.

Our unique structure, consisting of five distribution hubs, is geographically situated for effective, widespread product availability. Headed by our central sales and logistics team at our Blackpool headquarters and transported via our own fleet of Gledhill vehicles, we have ultimate control over the delivery of our products, enabling us to add value to our customers, meet demanding orders and high service expectations.

TRAINING

To ensure a consistently high standard of copper cylinder, Gledhill now has a dedicated training facility at the Centre of Excellence for copper in Birmingham. Here, all aspects of copper brazing and forming, as well as being given the technical theory behind copper cylinder manufacture, is instilled and championed.

SECURE ORDER TO FAST DELIVERY

GLEDHILL IS RENOWNED FOR OUR CAPABILITY TO PRODUCE COPPER CYLINDERS TO CUSTOM SPECIFICATIONS.

The versatility of copper makes it the perfect choice of material to produce bespoke, tailor-made cylinders that can be manufactured in a fast turnaround time. This has led to high demand, particularly for bespoke orders and one-off specials, that can be custom-made.

The buoyant demand for copper specials comes from a wide range of installations; from matching the exact specification of an old domestic cylinder that needs replacing, to creating a horizontal boiler to fit into the confined space of an attic.

Cylinder sizes can range from a 45-litre cylinder for use on pleasure boats, to a 960-litre industrial-sized model for use in commercial premises.

These cylinders are all manufactured in compliance with BS1566 and comply with 2010 Part L1B Building Regulations Replacement Cylinder requirements.

1800	71	118	164	180	206	277	318

A range of sizes from the table above are also available manufactured from stainless steel, please see page 10 for further details. Other sizes are available, please email our sales and logistics team at orders@gledhill.net for further details.

Standard combination cylinder capacities			
Height (mm)	Diameter (mm)	Capacity	
		Hot (litres)	Cold (litres)
750	450	60	20
900	450	85	20
1075	450	115	20
1200	450	120	40
1400	450	145	40
1500	450	166	40
1850	450	210	40
1200	500	145	45
1500	450	166	40

OTHER CONSIDERATIONS

WHAT ELSE DO YOU NEED TO CONSIDER WHEN ORDERING A GLEDHILL CYLINDER?

GRADES OF CYLINDER

There are three 'grades' of vented cylinder G1, G2, G3. All are built to the same manufacturing standard, the principle difference between the three grades is the gauge of the copper sheet used. To determine the grade required measure the distance from the waterline in the header (or feed and expansion) tank serving the cylinder and the base of the cylinder. This measurement is known as the 'working head' and determines the grade of cylinder to be used.

GRAVITY COIL

When ordering your Gledhill cylinder, you would need to specify if it requires a gravity coil. This is where the hot water circulation is attained by using the natural convection current rather than by the use of a circulation pump to 'force' the water around the system. The main difference in the cylinder design between a pumped and gravity circulation system is that the connections/coils are larger in the gravity systems to provide less resistance and increase the flow rate.

Additional components available at time of order*

ENVIROFOAM STAINLESS

STAINLESS STEEL VENTED CYLINDER, THE TRUE REPLACEMENT FOR YOUR COPPER CYLINDER.

Manufactured to comply with the HWA standard for stainless steel vented cylinders, these cylinders also have strong environmental credentials including:

- Industry leading 35mm HCFC free insulation
- Exceptionally low standing heat loss
- Insulation incorporates Polyol which is derived from rapeseed oil - a fully renewable resource
- With a duplex stainless steel internal cylinder, the product is fully recyclable at the end of its working life

With the open vented stainless steel cylinder, you will also benefit from:

- Next day lead time availability
- Easy access to immersion heater boss
- 400mm diameter models have 22mm compressions
- 450mm x 900mm model has 22mm compressions
- Remaining 450mm diameter models have 22mm compressions on coil and 28mm on cold feed and hot water draw off

KEY FEATURES

- 2017 ErP compliant
- Compression fittings
- Tapping positions to BS1566 specifications
- 10 year warranty
- Duplex stainless steel
- Power shower take-off/secondary return on all models as standard
- 100% recyclable
- Next day delivery available

ENVIROFOAM COPPER

COPPER VENTED INDIRECT CYLINDER FOR USE WITH A CONVENTIONAL BOILER.

Manufactured to BS1566 and 2017 ErP compliant, these cylinders have strong environmental credentials including:

- Industry leading 35mm HCFC free insulation
- Exceptionally low standing heat loss
- Insulation incorporates Polyol which is derived from rapeseed oil - a fully renewable resource
- With a copper internal cylinder, the product is fully recyclable at the end of its working life

As well as being the most attractive open vented copper cylinder available on the market, you will also benefit from:

- Next day lead time availability
- Standard 1inch male & female tappings with optional compression fittings available
- 25 minute recovery time
- Easy access to immersion heater boss

KEY FEATURES

- 2017 ErP compliant
- Standard 1inch male & female tappings with optional compression fittings available
- 10 year warranty
- Low standing heat loss
- 100% recyclable
- Next day delivery available
- Secondary return is an optional extra available on larger models

EXTRA COMPONENTS ARE AVAILABLE WITH THIS PRODUCT. PLEASE SEE PAGE 9 FOR MORE DETAILS.

HIGH RECOVERY COILS

AVAILABLE FOR USE IN COPPER CYLINDERS.

The EnviroFoam Copper cylinders are also available with a special high performance heat exchanger, on request, which reduces boiler cycling and maximises the time the boiler can operate in condensing mode. These were previously known as our CondensCyl range.

The special coil enables recovery in only 14 minutes which conforms to CHES best practice. The reduction in boiler cycling and faster recovery time combine to reduce the cost of producing hot water.

The high efficiency coil and its ability to heat only the water you require means that a smaller capacity cylinder can be used. For example, a typical 120 litre cylinder to meet Part L1B requirements would reduce to 80 litres using a high recovery coil.

Utilising the EnviroFoam insulation reduces standing losses – particularly beneficial during summer months.

Indirect specifications				
Gledhill code	ErP rating	Cylinder height (mm)	Cylinder diameter (mm)	Capacity (litres)
BIND13	C	750	400	80
BIND15	C	900	400	96

SIZES SHOWN ABOVE ARE INDICATIVE. PLEASE QUOTE STANDARD CODES AND ADD EX008 FOR HIGH RECOVERY COIL.

EXTRA COMPONENTS ARE AVAILABLE WITH THIS PRODUCT. PLEASE SEE PAGE 9 FOR MORE DETAILS.

KEY FEATURES

- 2017 ErP compliant
- Standard 1inch male & female tappings with optional compression fittings available
- High recovery
- Energy saving
- For use with fully pumped systems
- Perfectly matched with condensing boilers
- 100% recyclable
- Next day delivery available

SUPER RECOVERY CYLINDERS

FOR USE WHERE RAPID RECOVERY OF THE CYLINDER CONTENTS IS REQUIRED.

The quick recovery cylinder has a special high performance heat exchanger which reduces boiler cycling and maximises the time the boiler can operate in condensing mode.

Its special coil enables recovery in as little as five minutes, assuming a correctly sized boiler is installed.

The reduction in boiler cycling and faster recovery time combine to reduce the cost of producing hot water.

The super recovery cylinder's high efficiency coil and its ability to heat only the water you require means that a smaller capacity cylinder can be used. This makes it the ideal replacement choice where space is an issue but rapid reheat times are still required.

The cylinders 35mm of high insulation EnviroFoam further reduces standing losses – particularly beneficial during summer months.

Super recovery specifications				
Gledhill code	BIHR045	BIHR080	BIHR120

- 10 year warranty
- Recovery from 5 minutes
- Recovers as it is being used
- For use with fully pumped systems
- 100% recyclable
- Next day delivery available

ENVIROFOAM COPPER

COPPER VENTED DIRECT CYLINDER.

Manufactured to BS1566 and 2017 ErP compliant, these cylinders have strong environmental credentials including:

- Industry leading 35mm HCFC free insulation
- Exceptionally low standing heat loss
- Insulation incorporates Polyol which is derived from rapeseed oil - a fully renewable resource
- With a copper internal cylinder, the product is fully recyclable at the end of its working life

As well as being the most attractive open vented copper cylinder available on the market, you will also benefit from:

- Next day lead time availability
- Standard 1inch male & female tappings with optional compression fittings available
- Easy access to immersion heater boss

ONE OR TWO SIDE IMMERSIONS, AND OTHER ADDITIONAL COMPONENTS, ARE AVAILABLE FOR THESE PRODUCTS, PLEASE SEE PAGE 9 FOR MORE DETAILS.

KEY FEATURES

- 2017 ErP compliant
- Standard 1inch male & female tappings with optional compression fittings available
- 10 year warranty
- Low standing heat loss
- 100% recyclable
- Next day delivery available

COMBINATION UNITS

BOTH DIRECT AND INDIRECT CONFIGURATIONS.

The combination cylinder is specifically designed to be installed into properties without a loft space i.e. apartments etc. With the feed tank being incorporated into the combination unit, a separate cold water storage tank is not required, therefore installation is simplified and costs reduced.

With the combination unit, you will also benefit from:

- Next day lead time availability
- Standard 1inch male & female tappings with optional compression fittings available
- High recovery coil available
- Indirect units for use with central heating systems
- BS3198 and 2017 ErP compliant

SUNSPEED

DOMESTIC HOT WATER COPPER CYLINDER FOR USE WITH SOLAR ENERGY.

SunSpeed is a domestic hot water cylinder designed for use with solar panels. It is a copper cylinder with two heat exchangers, one for solar input and one for a boiler input.

The dedicated solar volumes range from 34% to 49% with the majority exceeding 40% enabling the best use of the solar panels. These dedicated solar volumes allow maximum suitable solar panels surface area from 2.9m² to 4.4m². The surface area of the solar heat exchanger coil is designed to exceed Building Regulations requirements.

The boiler coil comes into play in the cooler months of the year as the solar input diminishes. A correctly sized cylinder will ensure enough hot water is available to the householder during these months as the dedicated solar volume will not be heated by the boiler. The boiler coil is sized appropriately to the cylinder and gives a recovery time of less than 26 minutes with sizes to meet all regulations.

Indirect specifications					
Gledhill code	ErP rating	Nominal overall capacity (litres)	Cylinder size (mm)	Dedicated solar volume (litres)	Surface area of solar coil (m ²)
BSUN201	C	115	1050 x 400	41	0.29

BSUN210	C	205	1400 x 450	92	0.43
BSUN211	C	218	1500 x 450	109	0.44

The SunSpeed is an open vented cylinder which makes the location of the cylinder more flexible because the cylinder does not require a safety discharge pipe.

The SunSpeed cylinders are insulated using 35mm HCFC free EnviroFoam to comply with Part L of the Building Regulations. This insulation incorporates Polyol which is derived from rapeseed oil - a fully renewable resource. It also provides exceptionally low standing heat loss.

TWIN COIL CYLINDERS

FOR USE WITH TWO HEAT SOURCES - SOLID FUEL AND CONVENTIONAL BOILER.

The twin coil cylinders are designed to be used with two heat sources, including uncontrolled heat sources such as solid fuel (e.g. an Aga stove) alongside a conventional gas or electric boiler.

To boost the efficiency, an optional high recovery coil is available.

The cylinders are available in all three grades, which need to be specified at the time of ordering, and are available in bespoke size and specifications.

All the cylinders are 2017 ErP compliant and come with a 10 year warranty.

Compression fittings are available on these cylinders, but will need to be specified when ordering.

CONFIGURATION AT THE TIME OF ORDER.

COMMERCIAL CYLINDERS

CYLINDERS AND CALORIFIERS FOR COMMERCIAL AND INDUSTRIAL USES.

Gledhill manufactures a complete range of cylinders and calorifiers for commercial and industrial applications.

Calorifiers are available as standard patterns, horizontal or vertical or high performance 'Heatspeed' types. All are manufactured from copper, long recognised as the best material for water storage vessels giving the longest life.

The direct pattern is ideal where the only heat source is electricity, although these can also be made to incorporate a solar coil where a solar input is also available.

The indirect patterns are either 1 or 2 hour recovery as standard, but can be specified for a 30 minute recovery when ordering. These can also be used with solar or solid fuel inputs. Extra tappings or coils are also available to run underfloor heating from.

Capacities can range up to 1000 litres and products are individually made to order to accommodate connections and heat exchangers to suit individual applications.

A full range of extras including bolted heads, inspection ports, hand holes and cradles are available if required. Systems with high draw rate potential over extended periods are best served by units with high recovery capability and moderate storage capacity for balancing purposes.

RECTANGULAR TANKS

DIRECT AND INDIRECT RECTANGULAR COMBINATION TANKS.

The combination tanks are supplied in direct and indirect configurations. Both types of unit provide gravity fed hot water and can be installed at high level in a cupboard or in a roof space. The indirect model can also be used on pumped and sealed systems.

The direct model is designed for use with all off-peak tariffs, the thermal properties of the HCFC free insulation ensure low energy costs to the consumer. The direct combination tank ensures a fast, simple installation that will save money, time and materials, and can be supplied fitted with two 3kW immersion heaters and thermostats to make installation even quicker.

Even with future changes to the heating installation the indirect combination tank would not require replacing. For example, should the heating system be changed from open vented to a sealed primary circuit it can be adapted by simply blanking off the primary cold feed and primary vent connections.

Figure 1 shows a hot water store designed for use with electric.

Figure 2 shows a hot water store designed to be used with a sealed system or it can be used with a separate F&E tank for a fully pumped system.

TORRENT STAINLESS

THERMAL STORES PROVIDING BOTH HEATING AND MAINS PRESSURE HOT WATER.

A thermal store provides the perfect solution to a home's heating and hot water requirements. Torrent Stainless offers more options than any other store or cylinder, and is designed to reduce heating costs by offering complete flexibility for householders to use multiple energy sources.

The Torrent Stainless enables the hot water within the store to circulate around the heating system to provide heat to the property, with the domestic hot water being mains cold water instantaneously heated through a plate heat exchanger.

Thermal stores provide many additional benefits including:

- Mains pressure hot water
- No annual maintenance or safety check requirement
- No discharge pipework
- No risk of legionella
- No G3 qualification requirement for installation

The Torrent Stainless is manufactured from high specification duplex stainless steel by our trained engineers at our Blackpool headquarters.

Homeowners should select the thermal store which best suits their requirements, allowing them to maximise the available heat sources, whether they are traditional boilers, electric immersions, or increasingly popular alternative energy fuel sources.

The cylinder is open vented, enabling uncontrolled heat sources such as woodburning stoves to be used.

LEGIONELLA & SCALD PROTECTION

The domestic hot water is generated by mains cold water being instantaneously heated as it passes through the heat exchanger, which is then delivered to the taps. This method of generating the hot water completely removes the risk of legionella. Gledhill's patented intelligent controls, in conjunction with the sensors, regulate the hot water temperature. Blending valves at the shower and bath outlet prevent the risk of scalding.
